EFFICIENT WORKPLACE PROGRAM

Tailored Solutions to
Enhance Productivity

About Kimberly-Clark Professional

At Kimberly-Clark Professional, together, we create **exceptional** workplaces.

We aim to enhance business

Efficiency

Productivity

Performance

Excellence

Our commitment to delivering essential products and services empowers exceptional workplaces. With **150 years** of shaping work, we're your trusted partner for a thriving future.

Whether you're tackling surface disinfection protocols or grappling with stubborn grease and grime, **WypAll®** is a highly effective cleaning alternative.

As leaders in the professional cleaning sphere, with extensive research and customer insights, the **Efficient Workplace Program (EWP)** has been curated as an initiative within the WypAll® portfolio.

Unlocking Efficiency: A Comprehensive Overview of Our Efficient Workplace Program

In manufacturing facilities, opportunities to improve efficiency and reduce waste are often hidden in plain sight. Sometimes, all it takes is a fresh perspective to uncover these possibilities to enhance productivity.

Potential Impacts of Ineffective Supplies on Business Growth

The entire consumables life cycle within your facility can significantly influence your operational performance.

Efficient Workplace Program is a tailored initiative designed to cater to the unique needs and challenges faced by manufacturing facilities.

As a part of this program our experts take a round of your facility and offer you insights to identify and reduce waste while optimising overall operational efficiency.

Our program's differentiator lies in

A Customised Approach

Accurate Solution Alignment

Productivity Enhancement

Driving Excellence: The Core Purpose of Our Efficient Workplace Program

Applying efficient solutions to Consumable Management

Consumables Management means scrutinising the entire product lifecycle, **from selection to disposal**, to identify and eliminate waste.

Enhancing Efficiency

After inspecting your facility and identifying key improvement areas we provide precise solutions that transforms challenges into opportunities, and opportunities into sustained excellence, **ensuring your facility operates at its highest potential**.

Mitigating Wasteful Worker Activity with Fit-for-purpose Products

Wasteful worker activity can silently drain resources and productivity. **Our fit-for-purpose products, from customised cleaning solutions to user-friendly tools**, tackle waste, enabling efficient task performance and a productivity-focused workplace culture.

Guiding Workplace Transformation with Tailored Solutions

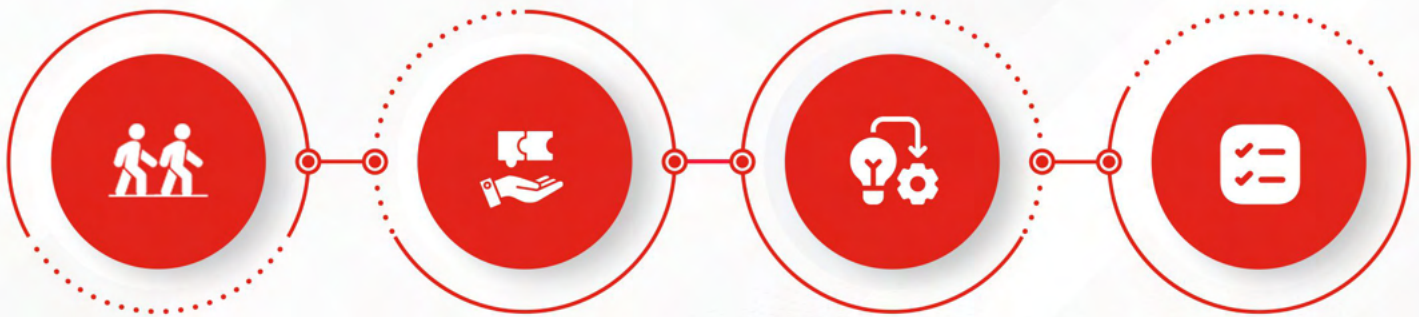

Our experts offer tailored strategies, guiding seamless transformation that aligns with your business objectives.

The Efficient Workplace Program Deconstructed: Understanding its Operational Dynamics

Your factory is familiar terrain, a fresh perspective is the key.

The Efficient Workplace Program is a structured
four-step process:

Walk

Identifying your
specific needs

Solve

Resolving
challenges with
tailored solutions

Implement

Assisting in
seamless
implementation

Check

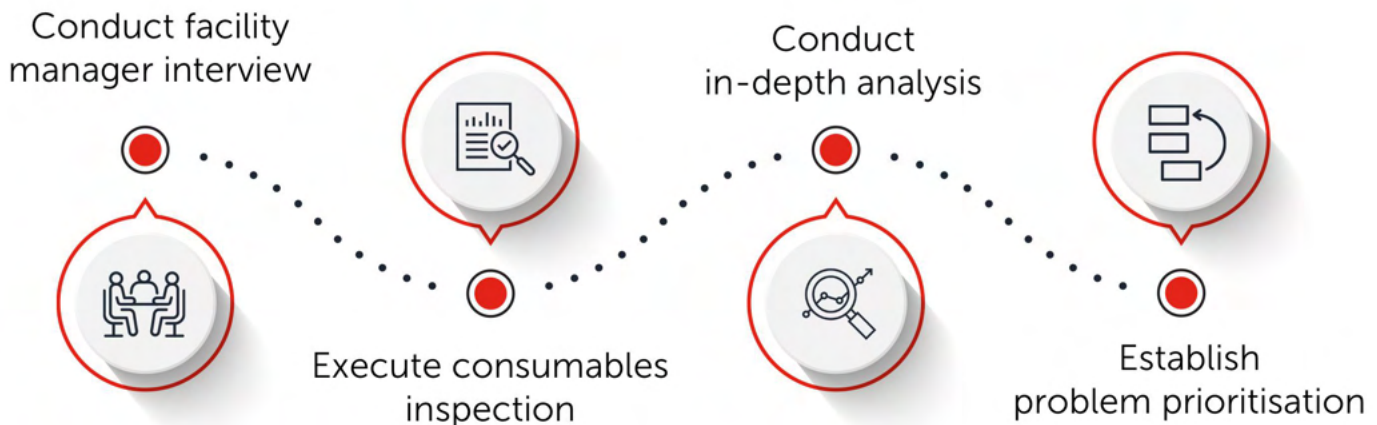

Ensuring the
sustained success
of these changes

1. WALK

Our journey begins with a thorough walk-through of your facility. Together, we take a round of the facility to **identify and prioritise areas of improvement**. We engage our keen observation and expertise to find out where improvements can make a significant difference.

Our Walk includes the following steps:

2. SOLVE

Once we've identified areas for improvement, our team of experts gets to work on **crafting precise solutions tailored to your specific needs starting with determining the root cause**.

With problem solving techniques like 5-whys, where you keep asking why the issue and breaking it down to the basics, we **figure out the core problem**.

Once done, we propose actionable strategies fine-tuned to address the unique operational requirements we've uncovered during our walk.

3. IMPLEMENT

With the designing of solutions, our experts start working on effective execution. We stand by your side throughout the implementation phase, ensuring that the proposed changes seamlessly integrate into your workflow.

The initial stages of introducing a new process or product to an end user are invariably critical, which calls for these measures:

Finalise **implementation** through product delivery, proper installation, and required training

Foster **partnerships** through ensuring solution adoption and trusted advisory support.

Set on an upcoming **site assessment**.

4. CHECK

We take the extra step to measure the impact of these solutions, providing you with concrete data that reflects their effectiveness. **We actively conduct regular check-ins, assessments, and adjustments**, to help you sustain best practices and ensure your facility operates at peak efficiency.

What our clients have to say

The results and benefits from the trial phase proved to be a tremendous success and the packaging manufacturer made the decision to **completely replace using rags with WypAll™ X80 Wipes** for the entire production unit in the end-Q1 of 2022.

After switching from rags to WypAll X80 Wipes, we immediately found benefits in hygiene practices, an improvement in safety during the cylinder cleaning process and we also found significantly reduced risk to the cylinders when cleaned with the X80 Wipes.

We are aware of hygiene issues around cotton waste and are excited to replace them with **WypAll™ X80 Wipes**. Feedback is good from the production department, and with the cost-in-use calculator, we have convinced our top management as well.

Environmental Health and Safety Manager
of a global packaging manufacturer

reduction in solvent consumption was reported by the customer, along with **enhanced cleaning efficiency and hygiene standards**, was observed when the manufacturer opted for **WypAll™ X80 wipes**.

This significant reduction in solvent consumption also meant that they would save more on solvent use with every cleaning cycle.
